Large-Language Models Disclosure

This document must be attached as the first page of any assignment you submit to this course.

Student Number: 829 7741. What large language models did you use to help you complete this assignment? (ChatGPT, Bard, etc.) Chat GPT. Please provide the 5 prompts you found most useful for solving this assignment: Jora Lot iterator methods Low to create a string from a list in Jora. Separating or string in jora ofter each. What limitations did you identify using LLM for this assignment? How did you overcome them? The hare to be specific with your prompts of themse. Chat GPT will mis understand your question. Otherwise, it's been pretty helpful. Using Chat GPT allows you to be more "autonomous", but gives you a false. Through your experience with using LLM to help you solve this assignment, what have you learned? How did this experience enhance your skills/thought process for future challenges? There are many interfact and premade classes a language that come with the java whi package. Using these premade classes/metage with the java whi package. Though these premade classes/metage with the java whi package. There we many interfact and premade classes a language with the java whi package. There we many interfact and premade classes for future challenges? There are many interfact and premade classes which they are sufficient. The specific collection of the same of the same with the your down the same with your down the same with the your down the you		Student Name: Juliane Buck
Please provide the 5 prompts you found most useful for solving this assignment: " jova list iterator methods " how to create a string from a list in Jova. " separating or string in jova after each; " colon in for loop in jova What limitations did you identify using LLM for this assignment? How did you overcome them? " you have to be specific with your prompts. Otherwise Chat GPT will mis understand your quishon. Otherwise Chat GPT will mis understand your quishon. Otherwise, it's been pretty helpful. Using Chat GPT allows you to be more "autonomous", but give you a false considered though you experience with using LLM to help you solve this assignment, what have you learned? How did this experience enhance your skills/thought process for future challenges? "there are many interfaced and premade classes that come with the java while practically without your do not a large that you do not a large withing code a lot essier / more ethicint. "Despit String Builder) for (element type lement code collection)		Student Number. 8297746.
Jora list iterator methods how to create a string from a list in Jora. Separation of string in jora after each; colon in for loop in java What limitations did you identify using LLM for this assignment? How did you overcome them? "You have to be specific wath your prompto otherwise Chat GPT will misunderstand your question. Otherwise this many hat gives helpful. Using Chat GPT allows you to be more "autonomous", but gives you a false considered? How did this experience enhance your skills/thought process for future challenges? There are many interfaced and premade classes hatter within you do. "Using these permade classes mithods can make writing code a lot easier more ethant." "Split String Builder , for (element type lement collection)		etc.)
othermise Chat GPT will miss understand your question. Othermise, it's been pretty helpful. Using Chat GPT allows you to be more "autonomous", but gives you a false considered? How did this experience enhance your skills/thought process for future challenges? Through your experience enhance your skills/thought process for future challenges? There are many interfaced and premade classes heter that come with the java while practical. Using these premade classes/ nethods can make writing code a lot easier/more ethaint. The split, String Builder, for (element type element: collection),	, a	how to create a string from a list in Java. Separating on string in join after each;
learned? How did this experience enhance your skills/thought process for future challenges? There are many interfaces and premade classes a language that come with the java while package. Using these premade classes/nethods can make writing code a lot easier/more ethicient. Split , String Builder , for (element type lement? collection),		othernse Chat GPT will misunderstand your question. Othernse, it's been pretty helpful. Using Chat GPT allows you to be more "autonomous", but gives you a false
make wilting code a lot easier/more ethicint. => split, String Builder, for (element type "lement" collection),		ethere are many interfaces and premade classes that come with the java while package.
1.76-1-4.	=	make writing code a lot easier/more ethaint.
